

LETTER OF PRESENTATION

Motivated by the desire to achieve the possibility of business cooperation, we need to briefly introduce you our company.

Elicom d.o.o. of Electrical Engineering and architectural activity was established in 1994. The foundation of reliable prior 30-year-electrical craftsmen. High European criteria of organization, professionalism and quality of performance, we're set at the beginning, have given rise to further our development and acquisition of the status of a successful and reputable company with ISO 9001:2000 and ISO 14000:2008.

We have approval for construction of buildings IV group demands, approval for construction of buildings of Group D and Permission for works on immobile cultural goods.

The main office is in Štefanovec 138. With approximately 400 sqm of office and approximately 1000 sqm workshop and storage space. The regional office is operating in Nova Ves 5 with 100 sqm of office space and parking. Autopark heavy vehicles and warehouse equipment in Štefanovec bb.

Our organizational capability, technical equipment, performing the seriousness and competence, based on professional, conscientious and responsible employees, has enabled us to successfully execute all contractual obligations in past years our business. Besides the standard electrical wiring and weak currents in the residential, commercial and industrial buildings, we performed electrical installation and maintenance works:

- Construction and maintenance of high and low voltage networks
- Reconstruction and maintenance of substations
- Construction and maintenance of plant generator installations
- Construction and maintenance of public lighting
- Building and maintaining sports lighting facility and grounds
- The construction, reconstruction and maintenance of electric. installation of thermal stations, boiler and compact cell
- Installation of sophisticated video surveillance systems and fire alarm
- Installation of technological processing and storage of coffee
- Construction and reconstruction of lightning protection and grounding the special purpose facilities (warehouse of explosives and ammunition)
- Construction of telecommunication antennas
- Building strong and weak electrical currents in the residential and commercial buildings

Continuous improvement, professional training and superstructure for the adoption of new international standards and scope of knowledge in the area of our business, our engineers, technicians and Electricians and installers are able to meet the most complex professional and technical, organizational and per future requirements of our clients. Now, it achieves a total of 132 employees, of which: 12 authorized electrical engineers, 8 electrical engineers, a licensed civil engineer, a graduate. 9 Economists and other highly qualified and 103 qualified electrician, wireman, engineers and drivers. The extensive list of works performed in recent years, as a special review of reports was typical of the above the performing area of our business.

With greeting and respect,

Manager:

Ivan Mučnjak
